

Tool Control / FOD

Every tool accounted for; every FOD-critical area proven clear.

A WHAT IT TRACKS

Controlled tools and kits on shadow boards, with check-out / check-in and FOD accountability.

C INSPECTION CADENCE

- Tool-control shadow-board audit — weekly
- FOD accountability audit (NAS412) — daily

B STANDARDS IT MAPS TO

AS9100

QMS for aviation, space & defense

NAS412

Foreign object damage / debris (FOD) prevention

D HOW IT WORKS — THE INFINID MECHANISM

- **Two tags, cross-checked.** Every asset carries an active V-Tag plus a passive RFID tag, bound together in AssetWorx!. Each read reconciles the two — a mismatch flags tag-swap, tamper, or an uninspected item put back into service.
- **Intervals watched for you.** The platform tracks each inspection interval by time, use-cycles or hours, and fires pre-expiry alerts before anything falls out of date.
- **Hands-free location.** The active V-Tag runs on a Zigbee self-healing mesh, reporting zone-level location that settles in about 3–4 minutes — tags report themselves, no scanning required.
- **Certificates & open data.** It generates the certificate / register of examination on demand, and feeds your ERP, reporting and AI through an open REST data contract.

KEY DATA CAPTURED Tool class, kit / shadow-board ID, FOD-critical flag, home storage location.
